Technology Stack (Proposed)

- HTML,CSS,JS
- Django as backend
- Bootstrap
- JQuery and ReactJs
- APIs

Features

1. Login/Signup

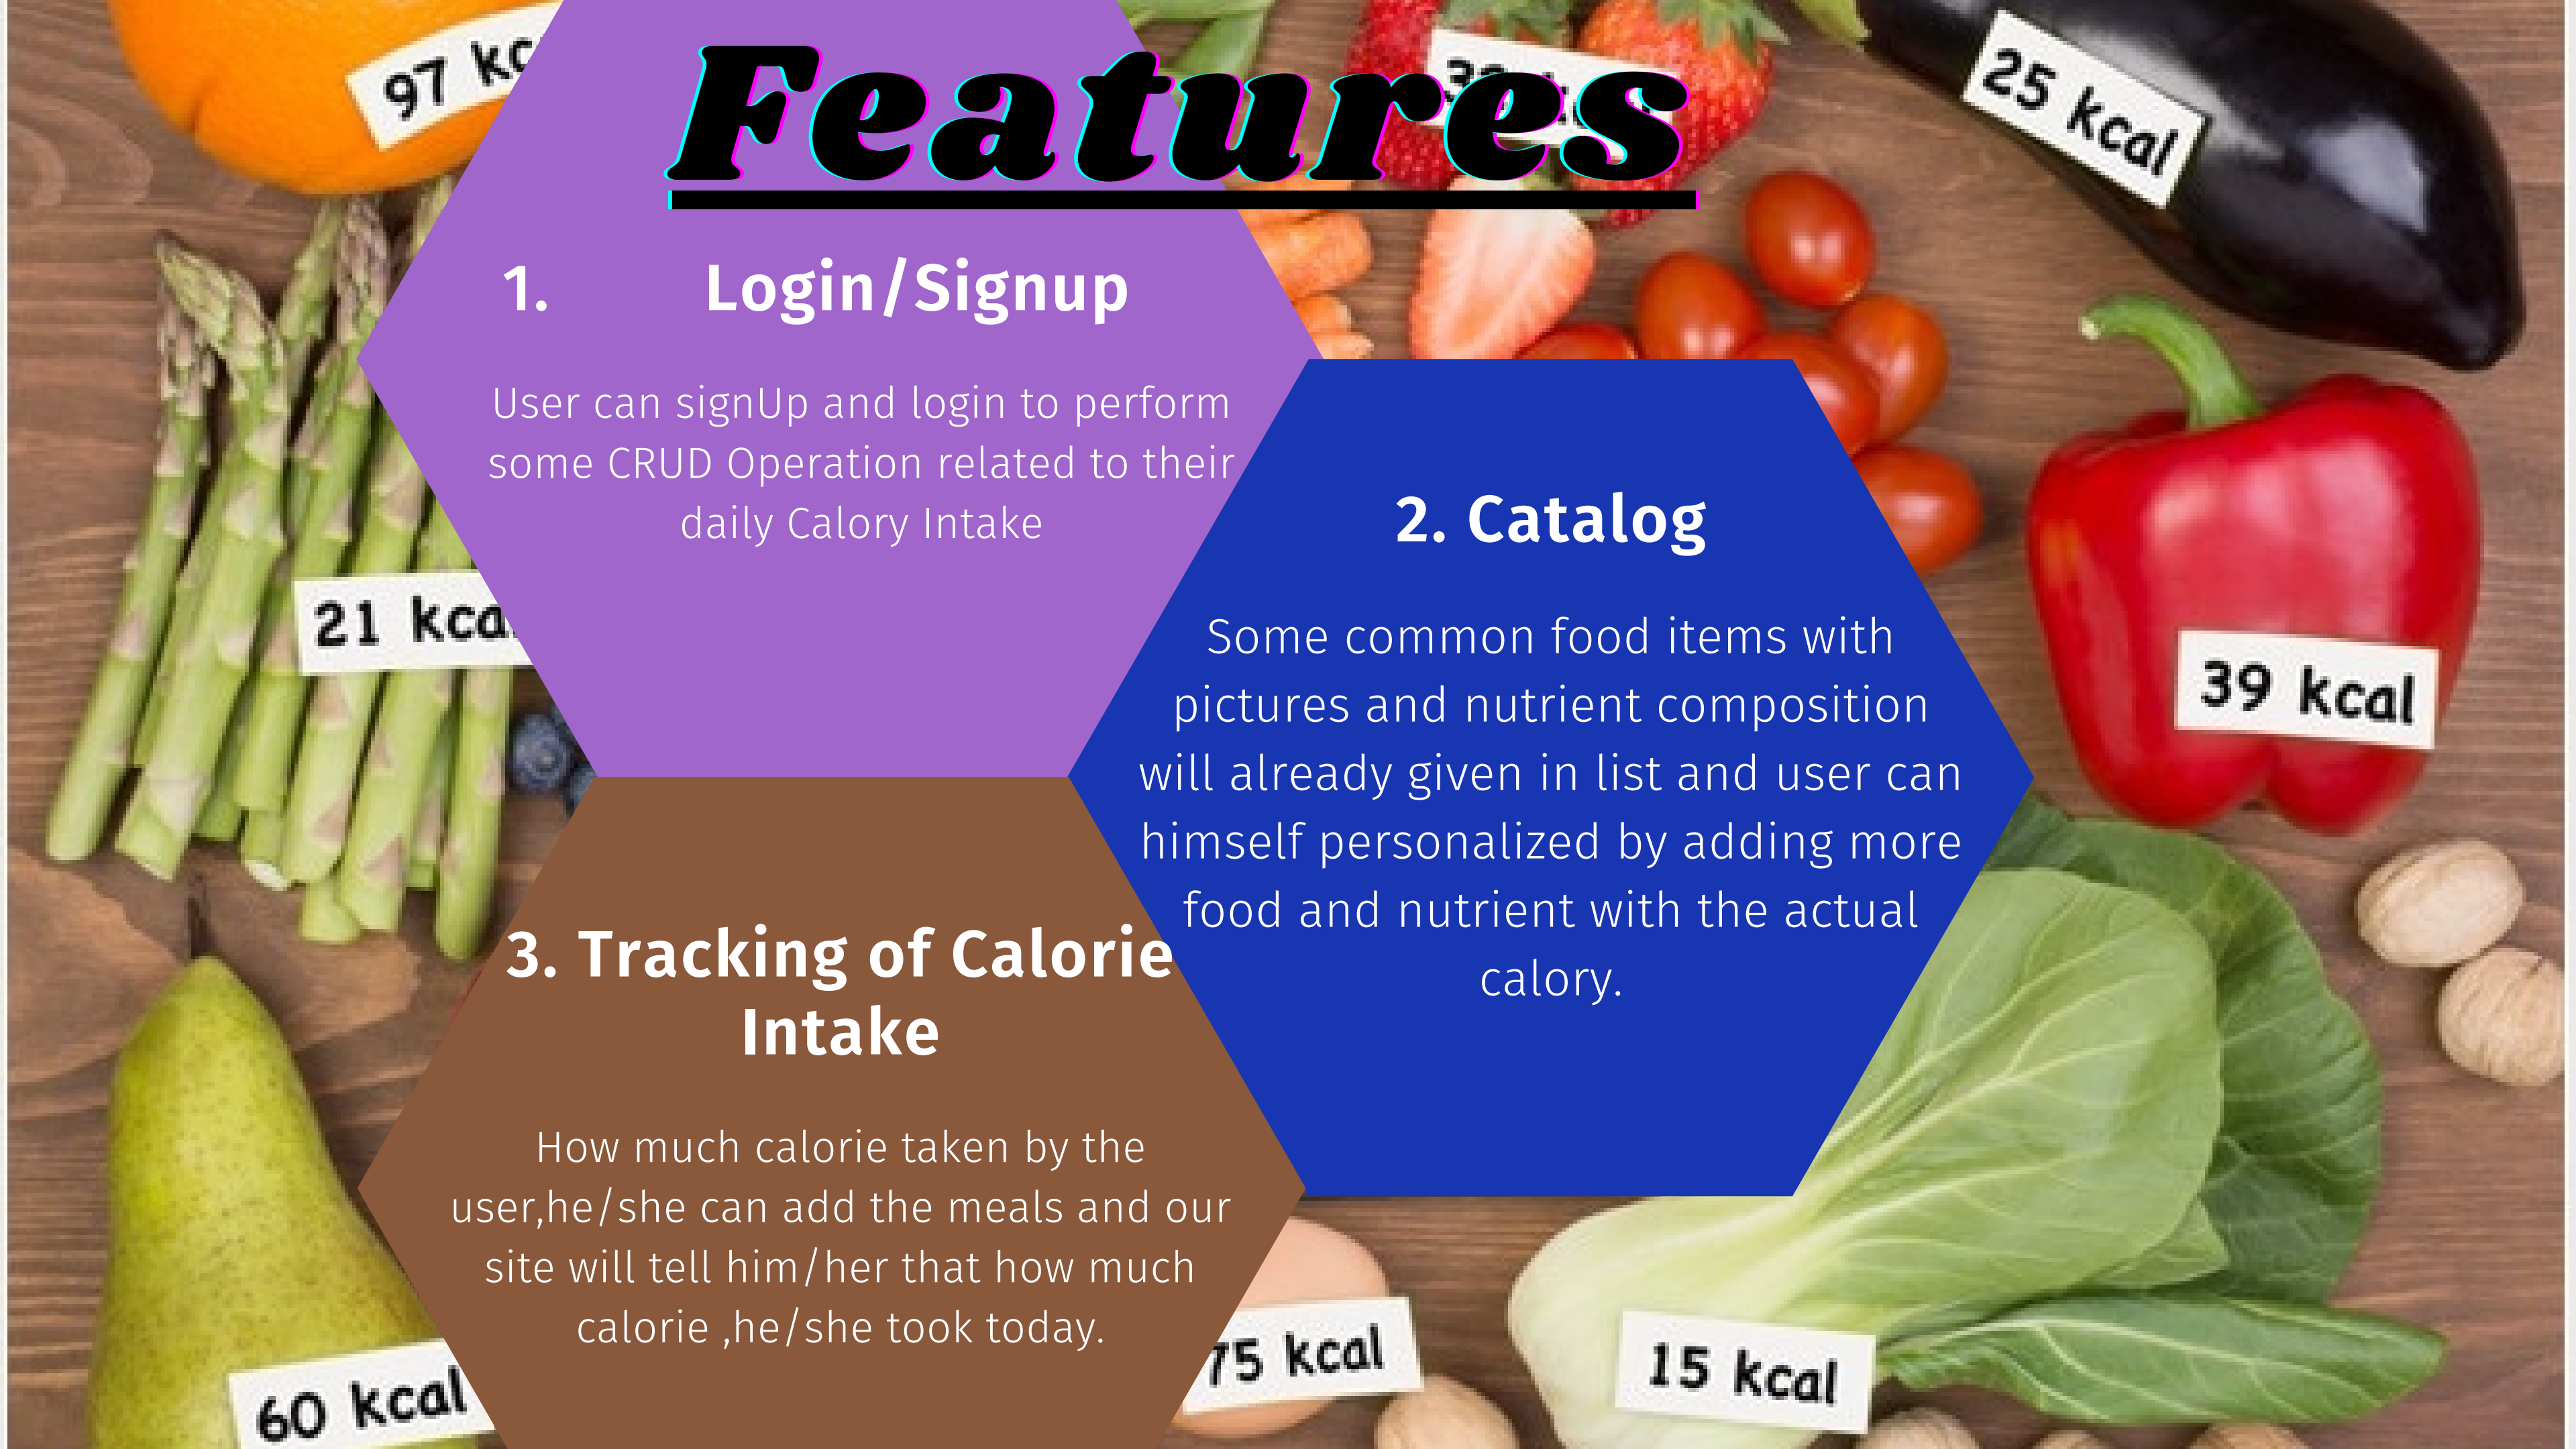

User can signUp and login to perform some CRUD Operation related to their daily Calory Intake

2. Catalog

Some common food items with pictures and nutrient composition will already given in list and user can himself personalized by adding more food and nutrient with the actual calory.

3. Tracking of Calorie Intake

How much calorie taken by the user,he/she can add the meals and our site will tell him/her that how much calorie ,he/she took today.

Features

4. BMI/Height/Weight

User can enter his weight and height, Our site will tell him/her, He/she is underweight or overweight and also if user want then we will tell him/her how the diet-plan he/she can follow to increase or loose weight.

5. Tracking Activities

User should input his daily workout details and our site will tell him/her that how much calory he/she burns and also tell him/her that how much colory more should burn or he/she burns more calory than he/she had taken that day.

6. Visualization

User can input his details like-how much calory he/she took and burns daily, weekly, monthly and our site will explain it through graph plot that how he/she is doing with calory.

7. Health-Tips

We will call a API to show daily health tips to the user.
